PC Based Servo Control System

(Technology Transferred to M/s Susee Spacetek Pvt. Ltd.)

ISRO has designed, developed, fabricated and installed several servo subsystems and systems for speed and position control applications. For some of these systems, concept design, configuration and system engineering are also carried out by ISRO. These systems have been operational and have demonstrated reliable performance. While these technologies were essentially developed for space applications, there are other spin off applications too. The PC based servo control system is a combination of servo control unit and a PC and in this capacity replaces the Antenna Control Unit.
